

Fall Sensor

Medical Accessory

As falls in the elderly become a significant cause of morbidity and seriously affect the health of those who fall, Fall Sensor provides one of the most effective solutions to minimize the potential harm falls may do to older adults. Worn by the user as a neck pendant 24 hours a day, Fall Sensor automatically raises alarm calls to the monitoring center and activates the medical alarm to open two-way voice communication when detecting a fall. Its fall detection reports make sure help reaches the user at the earliest possible time. The user can also press the Fall Sensor button to summon help when in need.

One of the smallest and most elegantly built of its kind on the market, Climax's Fall Sensor is designed to be light and comfortable. It contributes to the establishment of a complete telecare supervision network at any home.

Features:

- Worn as a neck pendant
- Elegant design
- IP45 waterproof standard
- Compatible with Climax medical alarms
- Low battery detection

Specifications:

- Radio frequency ranges:
 - 433MHz: Over 130 meters in open space
- Power: CR2477 3V lithium battery
- Battery life: 2 years or over*
- Radio range: Up to 400 meters in open space
- Operating temperature: -10°C to +45°C
- Operating humidity: Up to 85% non-condensing

* Note: Battery life is calculated at an average of one trigger per day.
